Education

The Iron Yard | *Front-End Engineering* | *April 2016*

The Iron Yard is a 12-week immersive code school where I gained the skills to become a Front-End Engineer. The first 9 weeks I attended lectures where I learned skills such as, HTML, CSS, JavaScript, Backbone.js, and React.js. The last 3 weeks were spent working on my final project, Wander No More, a web application that helps you decide what to do.
